ABIX Data Explorer — Financial Metrics, Ratios, Algorithms & Banking Concepts in Algeria

This document provides the comprehensive methodological reference for all **52 concepts** implemented in the ABIX Data Explorer platform across commercial banks in Algeria.

Scope: 21 banques commerciales algériennes

Terms: 52

Edition: 2025 / 2026

Generated: 26/08/2026

TABLE OF CONTENTS

Financial & Balance Sheet Indicators (8)

Total Assets (Balance Sheet Total) (TB) · Customer Deposits (DEP) · Customer Loans (CRE) · Accounting Equity (FP) · Net Banking Income (PNB) · Gross Operating Income (RBE) · Net Profit (Net Income) (RN) · Treasury Securities & Sovereign Bonds (BDT)

Ratios & Profitability (8)

Return on Equity (ROE) (ROE) · Return on Average Equity (ROAE) (ROAE) · Return on Assets (ROA) (ROA) · Return on Average Assets (ROAA) (ROAA) · Cost-to-Income Ratio (CIR) (CIR) · Net Interest Margin (NIM) (NIM) · Net Profit Margin on NBI (NPM) · GOI to Net Profit Conversion Rate (RBE_RN)

Risk, Solvency & Prudential (8)

Capital Adequacy Ratio (CAR) (CAR) · Tier 1 Capital Ratio (Tier1) · Non-Performing Loans Ratio (NPL Ratio) (NPL) · NPL Coverage Ratio (COV) · Provisioning Effort to Loans (Cost of Risk Proxy) (PROV_CRE) · Provision Burden on Gross Operating Income (PROV_RBE) · Equity to Total Assets (Accounting Capitalization) (FP_TB) · Accounting Leverage (Assets / Equity) (LEV)

Liquidity & Intermediation (7)

Loan-to-Deposit Ratio (LDR) (LDR) · Loans to Total Assets (CRE_TB) · Treasury Securities to Total Assets (BDT_TB) · Deposits to Total Assets (Liabilities) (DEP_TB) · Other Assets (Residual Balance) (AA) · Liquidity Coverage Ratio (LCR) (LCR) · Net Stable Funding Ratio (NSFR) (NSFR)

Statistics & Quantitative Methods (11)

Arithmetic Mean (Average) (MOY) · Median (50th Percentile / Q2) (MED) · Quartiles & Percentiles (Q1, Q2, Q3) (QUART) · Standard Deviation (σ) (SIGMA) · Coefficient of Variation (CV) (CV) · Compound Annual Growth Rate (CAGR) (CAGR) · Year-over-Year Growth (YoY / Δ) (YoY) · Rebased Index (Base 100) (B100) · Pearson Linear Correlation (r) (PEARSON) · Standardized Z-Score (Relative Positioning) (Z-SCORE) · Min-Max Normalization (0-100 Scale) (MINMAX)

Sector & Market Analysis (4)

Market Share (PDM) · Market Share Delta (Gain / Loss) (DELTA_PDM) · Public vs Private Sector Segmentation (PUB_PRIV) · Constant Scope vs Observed Scope (SCOPE)

Concentration & Competition (3)

Herfindahl-Hirschman Index (HHI) (HHI) · Concentration Ratios (CR3 & CR5) (CR3_CR5) · Effective Number of Banks (Equivalent Competitors) (NEFF)

ABIX Methodology & Framework (3)

ABIX 4D Assessment Framework (4D_ABIX) · Deterministic Rule-Based Scanning (SCAN) · E-Banking & Digital Transformation Barometer (EBANK)

CATEGORY

Financial & Balance Sheet Indicators

8 terms in this category

FINANCIAL & BALANCE SHEET INDICATORS · Unit: Mds DZD

Total Assets (Balance Sheet Total) (TB)

Aliases: Total Assets, Balance Sheet Size

◆ Contextual interpretation

SUMMARY DEFINITION

Measures the overall balance sheet scale of a bank by summing all its assets as of December 31.

DETAILED EXPLANATION

Total Assets represents total closing accounting assets. In ABIX Data Explorer, it serves as the benchmark aggregate for market share calculations, bank size grouping, and sector weighting.

ABIX CALCULATION FORMULA

Total Bilan = Caisse & Banques centrales + Titres & Bons du Trésor + Crédits clientèle + Autres actifs

HOW TO INTERPRET?

An indicator of relative size and institutional presence. It does not by itself measure profitability or solvency.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Consolidated sector total assets of approx. 18,500 billion DZD, ~87% held by public banks.

ABIX MODULES

Vue Secteur, Classements, Profil Banque, Historique, Parts de marché, Executive Dashboard

RELATED TERMS

depots-clientele, credits-clientele, fonds-propres, part-de-marche

FINANCIAL & BALANCE SHEET INDICATORS · Unit: Mds DZD

Customer Deposits (DEP)

Aliases: Deposits collected, Customer resources

◆ Contextual interpretation

SUMMARY DEFINITION

Total financial resources entrusted to the bank by customers in checking, term, or savings accounts.

DETAILED EXPLANATION

Customer deposits aggregate demand, term, savings, and collateral deposits from households, corporates, and institutions. They represent the primary funding base for intermediation.

ABIX CALCULATION FORMULA

Dépôts = Dépôts à vue + Dépôts à terme + Livrets d'épargne + Autres dépôts clientèle

HOW TO INTERPRET?

Measures funding capture and customer loyalty. A high share of demand deposits lowers overall cost of funding.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Total deposit volume of 14,200 billion DZD.

ABIX MODULES

Vue Secteur, Classements, Profil Banque, Historique, Parts de marché, Comparateur

RELATED TERMS

total-bilan, credits-clientele, ratio-prets-depots, depots-total-passif

FINANCIAL & BALANCE SHEET INDICATORS · Unit: Mds DZD

Customer Loans (CRE)

Aliases: Customer loans, Gross loans, Credit portfolio

◆ Contextual interpretation

SUMMARY DEFINITION

Total outstanding financings and credit facilities granted to the economy (enterprises, professionals, retail).

DETAILED EXPLANATION

Represents total gross lending facilities extended by the bank across overdrafts, corporate working capital, equipment loans, mortgages, and consumer credit.

ABIX CALCULATION FORMULA

Crédits = Crédits d'exploitation + Crédits d'investissement + Crédits immobiliers + Crédits aux particuliers

HOW TO INTERPRET?

Reflects the bank's active contribution to economic financing and counterparty risk exposure.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Gross customer loans of 11,100 billion DZD.

ABIX MODULES

Vue Secteur, Classements, Profil Banque, Historique, Parts de marché, Comparateur

RELATED TERMS

total-bilan, depots-clientele, ratio-prets-depots, prets-total-actif, taux-npl

FINANCIAL & BALANCE SHEET INDICATORS · Unit: Mds DZD

Accounting Equity (FP)

Aliases: Total Equity, Book Value, Shareholders Equity

▲ Higher generally better

SUMMARY DEFINITION

Stable resources belonging to shareholders, comprising share capital, reserves, and retained earnings.

DETAILED EXPLANATION

Accounting Equity represents the net book value on the balance sheet. It acts as the financial cushion against unexpected losses. ABIX note: book equity is distinct from regulatory capital (Tier 1/Tier 2) under Bank of Algeria Regulation 2014-01.

ABIX CALCULATION FORMULA

Fonds Propres = Capital social + Primes d'émission + Réserves + Report à nouveau + Résultat net

HOW TO INTERPRET?

A high equity buffer enhances financial autonomy and shock absorption capacity.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector accounting equity of 2,450 billion DZD.

ABIX MODULES

Vue Secteur, Profil Banque, Classements, Scores ABIX (Capitalisation)

RELATED TERMS

total-bilan, return-on-equity, fonds-propres-total-bilan, ratio-solvabilite

FINANCIAL & BALANCE SHEET INDICATORS · Unit: Mds DZD

Net Banking Income (PNB)

Aliases: Net Banking Income, NBI, Banking Operating Revenue

▲ Higher generally better

SUMMARY DEFINITION

Gross banking operational margin measuring revenue creation before operating expenses.

DETAILED EXPLANATION

NBI is the banking equivalent of gross revenue. It consists of net interest income, net fee and commission income, and net trading and FX gains.

ABIX CALCULATION FORMULA

PNB = (Intérêts reçus – Intérêts versés) + (Commissions reçues – Commissions payées) + Gains de change & titres

HOW TO INTERPRET?

Reflects commercial dynamism and the bank's capacity to monetize intermediation and payment services.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector Net Banking Income of 430 billion DZD.

ABIX MODULES

Vue Secteur, Profil Banque, Classements, Scores ABIX (Dynamique), Historique

resultat-brut-exploitation, resultat-net, coefficient-exploitation, marge-interet-nette

FINANCIAL & BALANCE SHEET INDICATORS · Unit: Mds DZD

Gross Operating Income (RBE)

Aliases: Gross Operating Profit, GOI, Operating Profit before provisions

▲ Higher generally better

SUMMARY DEFINITION

Surplus generated by core operations after deducting general operating expenses and depreciation.

DETAILED EXPLANATION

GOI measures the pure operational profitability before credit risk provisions and non-recurring items. It equals NBI minus operating costs and depreciation.

ABIX CALCULATION FORMULA

RBE = Produit Net Bancaire – Frais généraux d'exploitation – Dotations aux amortissements

HOW TO INTERPRET?

A solid and growing GOI demonstrates disciplined cost management relative to commercial revenue.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector Gross Operating Income of 245 billion DZD.

FINANCIAL & BALANCE SHEET INDICATORS · Unit: Mds DZD

Net Profit (Net Income) (RN)

Aliases: Net Income, Net Profit, Bottom Line

▲ Higher generally better

SUMMARY DEFINITION

Bottom-line profit or loss attributable to the bank after credit risk provisions and corporate taxes.

DETAILED EXPLANATION

Net Income represents final net earnings after cost of risk (loan provisions), corporate income tax (IBS), and non-operating gains/losses.

ABIX CALCULATION FORMULA

Résultat Net = RBE – Coût net du risque (Provisions nettes) + Résultat exceptionnel – Impôts (IBS)

HOW TO INTERPRET?

Ultimate measure of financial return. It directly builds equity through retained earnings or funds dividend distribution.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Consolidated sector net profit of 185 billion DZD.

ABIX MODULES

FINANCIAL & BALANCE SHEET INDICATORS · Unit: Mds DZD

Treasury Securities & Sovereign Bonds (BDT)

Aliases: Treasury Bonds, Sovereign Debt, Government Securities

◆ Contextual interpretation

SUMMARY DEFINITION

Outstanding stock of sovereign debt securities issued by the Algerian Treasury held by the bank.

DETAILED EXPLANATION

Includes short-term and medium/long-term sovereign paper issued by the State Treasury. In Algeria, Treasury paper represents a core asset allocation pillar. Prudential note: Sovereign exposures may benefit from preferential prudential treatment in accordance with applicable regulatory frameworks and qualifying criteria.

ABIX CALCULATION FORMULA

Bons du Trésor = Bons du Trésor à Court Terme + Bons du Trésor à Moyen et Long Terme + Titres assimilés

HOW TO INTERPRET?

A high share reflects a conservative asset allocation strategy or surplus liquidity invested in sovereign debt.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector Treasury securities portfolio of 3,800 billion DZD.

CATEGORY

Ratios & Profitability

8 terms in this category

RATIOS & PROFITABILITY · [Benchmark ABIX](#) · Unit: %

Return on Equity (ROE) (ROE)

Aliases: ROE, Return on Equity, Shareholders Return

▲ Higher generally better

SUMMARY DEFINITION

Ratio of net income to closing equity, measuring financial return generated for shareholders.

DETAILED EXPLANATION

In ABIX Data Explorer, standard ROE is calculated by dividing net profit by closing book equity as of December 31. It measures the return generated on invested capital. Methodology note: for multi-year dynamic analyses, refer also to ROAE based on average equity.

ABIX CALCULATION FORMULA

$$ROE = (\text{Résultat Net} \div \text{Fonds Propres de clôture}) \times 100$$

HOW TO INTERPRET?

A higher ROE reflects strong financial profitability, but must be evaluated alongside leverage and underlying risk profile.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Modéré < 8 %, Standard sectoriel 8-15 %, Élevé > 15 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector median ROE of 9.8%, ranging from 3.5% to over 22%.

ABIX MODULES

Vue Secteur, Classements, Profil Banque, Scores ABIX (Rentabilité), Matrice Rentabilité vs Risque

RELATED TERMS

RATIOS & PROFITABILITY · [Benchmark ABIX](#) · Unit: %

Return on Average Equity (ROAE) (ROAE)

Aliases: ROAE, Return on Average Equity

▲ Higher generally better

SUMMARY DEFINITION

Ratio of net income to average equity between the beginning and end of the fiscal year.

DETAILED EXPLANATION

ROAE neutralizes intra-year capital variations (equity injections, dividend payouts). It provides a refined economic measurement of returns on capital employed throughout the year.

ABIX CALCULATION FORMULA

$ROAE = [Résultat\ Net \div ((Fonds\ Propres\ t + Fonds\ Propres\ t-1) \div 2)] \times 100$

HOW TO INTERPRET?

Preferred for rigorous multi-year analysis when material intra-year equity changes occur.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Standard sectoriel 8-15 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre constant)

2024 data, ABIX 2025 edition, constant scope: For 12B DZD profit and equity moving from 100B to 120B DZD, ROAE is 10.9% (vs 10.0% closing ROE).

ABIX MODULES

Profil Banque (Analytique), Comparateur Avancé

RELATED TERMS

RATIOS & PROFITABILITY · [Benchmark ABIX](#) · Unit: %

Return on Assets (ROA) (ROA)

Aliases: ROA, Return on Total Assets

▲ Higher generally better

SUMMARY DEFINITION

Ratio of net income to closing total assets, measuring overall asset productivity.

DETAILED EXPLANATION

In ABIX Data Explorer, ROA is computed on closing balance sheet assets as of December 31. It measures the bank's ability to generate earnings per unit of asset managed.

ABIX CALCULATION FORMULA

$ROA = (\text{Résultat Net} \div \text{Total Bilan de clôture}) \times 100$

HOW TO INTERPRET?

A key indicator of operational profitability. In banking, a ROA above 1.5% reflects strong underlying earning power.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Modéré < 0,8 %, Moyen 0,8-1,5 %, Élevé > 1,5 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector average ROA of 1.12%, with peaks above 2.5% among private specialized institutions.

ABIX MODULES

Vue Secteur, Classements, Profil Banque, Scores ABIX (Rentabilité), Matrice 4 Quadrants

RELATED TERMS

return-on-average-assets, return-on-equity, total-bilan, resultat-net

RATIOS & PROFITABILITY · [Benchmark ABIX](#) · Unit: %

Return on Average Assets (ROAA) (ROAA)

Aliases: ROAA, Return on Average Assets

▲ Higher generally better

SUMMARY DEFINITION

Ratio of net income to average total assets across the fiscal year.

DETAILED EXPLANATION

ROAA smooths out intra-year balance sheet expansions (rapid deposit growth, refinancing). It represents the academic standard for measuring asset efficiency over time.

ABIX CALCULATION FORMULA

$$ROAA = [Résultat\ Net \div ((Total\ Bilan\ t + Total\ Bilan\ t-1) \div 2)] \times 100$$

HOW TO INTERPRET?

International benchmark standard to neutralize year-end balance sheet seasonality.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Standard sectoriel 0,8-1,5 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre constant)

2024 data, ABIX 2025 edition, constant scope: 5B DZD profit on assets expanding from 400B to 500B DZD: ROAA is 1.11% (vs 1.00% closing ROA).

RATIOS & PROFITABILITY · [Benchmark ABIX](#) · Unit: %

Cost-to-Income Ratio (CIR) (CIR)

Aliases: Cost-to-Income Ratio, CIR, Efficiency Ratio, Operating Expense Ratio

▼ Lower generally better

SUMMARY DEFINITION

Share of Net Banking Income consumed by operating overhead and depreciation.

DETAILED EXPLANATION

The CIR measures operational efficiency. A lower ratio indicates higher operational productivity in converting revenues to gross profit. In ABIX scoring models, it operates as an inverted metric (lower is better).

ABIX CALCULATION FORMULA

Coefficient d'Exploitation = [(Frais généraux + Amortissements) ÷ Produit Net Bancaire] × 100

HOW TO INTERPRET?

A lower ratio reflects lean operations. A ratio above 60-65% indicates elevated structural overhead.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Excellente efficience < 40 %, Moyen 40-55 %, Faible efficience > 60 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector median CIR of 43.5%, top-tier efficient banks standing below 35%.

ABIX MODULES

Vue Secteur, Classements, Profil Banque, Scores ABIX (Efficience), Historique

RELATED TERMS

RATIOS & PROFITABILITY · [Benchmark ABIX](#) · Unit: %

Net Interest Margin (NIM) (NIM)

Aliases: Net Interest Margin, NIM, Interest Spread Margin

▲ Higher generally better

SUMMARY DEFINITION

Ratio of net interest income earned to interest-earning assets.

DETAILED EXPLANATION

NIM measures the core spread profitability of financial intermediation. ABIX methodology note: Where detailed average earning assets are not homogeneously reported across all banks, ABIX applies the NBI / Total Assets proxy ratio.

ABIX CALCULATION FORMULA

$$\text{NIM théorique} = (\text{Marge d'intérêt nette} \div \text{Actifs productifs moyens}) \times 100 \mid \text{Proxy ABIX} = (\text{PNB} \div \text{Total Bilan}) \times 100$$

HOW TO INTERPRET?

A healthy margin reflects loan pricing discipline combined with low-cost customer funding.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Standard sectoriel 2,0-3,5 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector average NBI / Total Assets proxy of 2.35%.

RATIOS & PROFITABILITY · [Benchmark ABIX](#) · Unit: %

Net Profit Margin on NBI (NPM)

Aliases: Net Margin, Net Profit Margin, Net Income to NBI

▲ Higher generally better

SUMMARY DEFINITION

Percentage of Net Banking Income successfully converted into final net profit.

DETAILED EXPLANATION

Net Profit Margin assesses the overall capacity of the bank to retain revenues after operating costs, loan impairment provisions, and corporate taxes.

ABIX CALCULATION FORMULA

Marge Nette sur PNB = (Résultat Net ÷ Produit Net Bancaire) × 100

HOW TO INTERPRET?

A higher margin indicates a highly profitable and resilient operating model.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Standard sectoriel 35-50 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector median net profit margin of 42.8%.

RATIOS & PROFITABILITY · [Benchmark ABIX](#) · Unit: %

GOI to Net Profit Conversion Rate (RBE_RN)

Aliases: *GOI Conversion Rate, Operating Profit Retention*

▲ Higher generally better

SUMMARY DEFINITION

Share of Gross Operating Income retained as net profit after credit risk provisions and taxes.

DETAILED EXPLANATION

Measures the resilience of operational income against provisions and taxes. A conversion rate near 100% indicates that gross operating profit was not impaired by credit loss charges.

ABIX CALCULATION FORMULA

Taux de Conversion RBE → RN = (Résultat Net ÷ RBE) × 100

HOW TO INTERPRET?

A sharp drop signals an acceleration in credit loss provisioning or non-operating write-offs.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Standard sectoriel 65-85 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector median conversion rate of 75.5%.

CATEGORY

Risk, Solvency & Prudential

8 terms in this category

RISK, SOLVENCY & PRUDENTIAL · **Regulatory Standard** · Unit: %

Capital Adequacy Ratio (CAR) (CAR)

Aliases: Capital Adequacy Ratio, CAR, Solvency Ratio, Regulatory Capital to RWA

▲ Higher generally better

SUMMARY DEFINITION

Ratio of regulatory capital to risk-weighted assets (credit, market, operational risks).

DETAILED EXPLANATION

Measures the prudential capital cushion against risk-weighted assets. Algerian regulatory framework: Pursuant to Bank of Algeria Regulation No. 2014-01 of February 16, 2014, mandatory requirements are: 1) Minimum global capital adequacy ratio: at least 9.5% of risk-weighted assets; 2) Tier 1 capital: at least 7.0% of risk-weighted assets. ABIX comfort benchmark: An indicative comfort range in the local market is generally situated between 14% and 18%.

ABIX CALCULATION FORMULA

Ratio de Solvabilité = (Fonds Propres Réglementaires Globaux ÷ Actifs Pondérés par les Risques) × 100

HOW TO INTERPRET?

A ratio exceeding the 9.5% legal minimum confirms regulatory compliance. A very high ratio (> 20%) ensures maximum safety but may signal under-deployed credit capacity.

CLASSIFICATION & THRESHOLDS

Mandatory Regulatory Framework : Solvabilité globale >= 9,5 % | Tier 1 >= 7,0 % (Règlement BA n° 2014-01)

ABIX Comfort Benchmark : Repère de confort ABIX >= 14-18 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre bancaire algérien)

2024 data, ABIX 2025 edition: Sector average CAR estimated at ~16.2%, well above the 9.5% regulatory floor.

ABIX MODULES

Vue Secteur, Profil Banque, Scores ABIX (Solvabilité), Fiche Prudentielle

RELATED TERMS

tier-1-ratio, fonds-propres, fonds-propres-total-bilan, taux-npl

RISK, SOLVENCY & PRUDENTIAL · **Regulatory Standard** · Unit: %

Tier 1 Capital Ratio (Tier1)

Aliases: Tier 1 Ratio, Core Capital Ratio, Going-Concern Capital

▲ Higher generally better

SUMMARY DEFINITION

Ratio of highest quality core capital (paid-up capital and retained earnings) to risk-weighted assets.

DETAILED EXPLANATION

Tier 1 ratio evaluates the bank's capacity to absorb immediate losses on a going-concern basis. Algerian regulation: BA Regulation No. 2014-01 mandates a minimum Tier 1 capital ratio of 7.0% of risk-weighted assets.

ABIX CALCULATION FORMULA

Ratio Tier 1 = (Fonds Propres de Base Tier 1 ÷ Actifs Pondérés par les Risques) × 100

HOW TO INTERPRET?

A strong Tier 1 ratio ensures long-term viability without requiring emergency capital injections in stress scenarios.

CLASSIFICATION & THRESHOLDS

Mandatory Regulatory Framework : >= 7,0 % (Règlement Banque d'Algérie n° 2014-01)

ABIX Comfort Benchmark : Repère de confort ABIX >= 11-14 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, banques algériennes)

2024 data, ABIX 2025 edition: Average Tier 1 ratio of major Algerian banks estimated above 13.5%, compliant with regulations.

RISK, SOLVENCY & PRUDENTIAL · **Market Reference** · Unit: %

Non-Performing Loans Ratio (NPL Ratio) (NPL)

Aliases: NPL Ratio, Bad Loan Ratio, Impaired Loans Ratio, Non-Performing Assets

▼ **Lower generally better**

SUMMARY DEFINITION

Proportion of loans with payments past due (typically > 90 days) or presenting recognized default risk.

DETAILED EXPLANATION

The NPL ratio is the primary indicator of asset quality. It measures impaired and doubtful loans relative to total gross credit portfolio. In ABIX, it is an inverted metric (lower is better).

ABIX CALCULATION FORMULA

Taux NPL = (Créances Non Performantes brutes ÷ Encours Total des Crédits bruts) × 100

HOW TO INTERPRET?

A low ratio reflects strict underwriting standards and efficient recovery. A high ratio necessitates heavy provisioning that weighs on profit.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Qualité excellente < 4 %, Modérée 4-8 %, Vigilance > 10 %

CONCRETE EXAMPLE (Données sectorielles indicatives, Édition ABIX 2025)

Indicative sector data: Average sector NPL ratio around 10-12%, with marked divergence between public banks (legacy exposures) and private subsidiaries (often < 5%).

ABIX MODULES

Profil Banque, Comparateur, Matrice Rentabilité vs Risque

RISK, SOLVENCY & PRUDENTIAL · **Market Reference** · Unit: %

NPL Coverage Ratio (COV)

Aliases: NPL Coverage Ratio, Provisioning Coverage, Impairment Coverage

▲ Higher generally better

SUMMARY DEFINITION

Ratio of accumulated loan loss provisions to total non-performing loans.

DETAILED EXPLANATION

Assesses the degree of balance sheet protection against anticipated credit losses on impaired loans. A high coverage ratio means that the bulk of bad debt is already provisioned.

ABIX CALCULATION FORMULA

Taux de Couverture = (Stock de Provisions pour Dépréciation ÷ Encours Brut des NPL) × 100

HOW TO INTERPRET?

A coverage ratio above 70-80% is widely regarded as a prudential comfort benchmark in emerging banking markets.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Couverture prudente recommandée >= 70-80 %

CONCRETE EXAMPLE (Exemple méthodologique calibré)

Methodological example: For 50B DZD in impaired loans with 40B DZD in cumulative provisions, the coverage ratio stands at 80.0%.

ABIX MODULES

RISK, SOLVENCY & PRUDENTIAL · [Benchmark ABIX](#) · Unit: %

Provisioning Effort to Loans (Cost of Risk Proxy) (PROV_CRE)

Aliases: Net Provisions to Loans, Cost of Risk to Lending, Provisioning Rate

▼ Lower generally better

SUMMARY DEFINITION

Annual net loan loss provisioning charges divided by total loan portfolio.

DETAILED EXPLANATION

Serves as the direct proxy for cost of risk in ABIX Data Explorer. It measures the annual P&L; charge required to absorb credit deterioration across the loan book.

ABIX CALCULATION FORMULA

Effort de Provisionnement = (Dotations Nettes aux Provisions ÷ Encours des Prêts) × 100

HOW TO INTERPRET?

A low and steady provisioning effort indicates disciplined underwriting and low default incidence.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Faible < 0,5 %, Moyen 0,5-1,2 %, Élevé > 1,5 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector median provisioning effort of 0.55% of total loans.

Provision Burden on Gross Operating Income (PROV_RBE)

Aliases: Provisions to GOI, Operating Profit Absorption by Risk

▼ Lower generally better

SUMMARY DEFINITION

Percentage of Gross Operating Income consumed by net credit loss provisioning charges.

DETAILED EXPLANATION

Measures the proportion of operating income absorbed by credit loss provisioning. ABIX note: An increase may reflect deteriorating borrower quality or a proactive, conservative provisioning stance.

ABIX CALCULATION FORMULA

$$\text{Pression Provisions} / \text{RBE} = (\text{Dotations Nettes aux Provisions} \div \text{RBE}) \times 100$$

HOW TO INTERPRET?

A ratio below 20-25% preserves the bulk of operating surplus for net bottom-line profit.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Confortable < 20 %, Modéré 20-35 %, Pression forte > 40 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector median provision burden on GOI of 18.4%.

Equity to Total Assets (Accounting Capitalization) (FP_TB)

Aliases: *Equity-to-Assets Ratio, Capitalization Ratio, Equity Cushion*

▲ Higher generally better

SUMMARY DEFINITION

Share of the balance sheet financed by book equity.

DETAILED EXPLANATION

Direct accounting metric of balance sheet equity backing. ABIX note: This is a simplified accounting capitalization ratio and does not substitute for regulatory solvency ratios based on risk-weighted assets (RWA).

ABIX CALCULATION FORMULA

Fonds Propres / Total Bilan = (Fonds Propres Comptables ÷ Total Bilan) × 100

HOW TO INTERPRET?

A high ratio (> 12-15%) indicates strong capital backing and high financial safety.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Standard sectoriel 10-16 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector average ratio of 13.2%, reflecting strong equity backing.

ABIX MODULES

RISK, SOLVENCY & PRUDENTIAL · [Benchmark ABIX](#) · Unit: x

Accounting Leverage (Assets / Equity) (LEV)

Aliases: Accounting Leverage, Equity Multiplier, Assets to Equity

◆ Contextual interpretation

SUMMARY DEFINITION

Number of times total assets exceed the bank's book equity.

DETAILED EXPLANATION

Measures balance sheet asset scale relative to equity backing. ABIX note: This is a simplified accounting leverage multiple and does not constitute the Basel III regulatory leverage ratio (which includes off-balance sheet items and prudential deductions).

ABIX CALCULATION FORMULA

Levier Comptable = Total Bilan ÷ Fonds Propres Comptables

HOW TO INTERPRET?

A moderate leverage (6x to 9x) ensures strong safety. Elevated leverage (> 15x) heightens solvency vulnerability.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Repère prudentiel indicatif 6x à 10x

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector median accounting leverage of 7.6x.

7 terms in this category

LIQUIDITY & INTERMEDIATION · **Market Reference** · Unit: %

Loan-to-Deposit Ratio (LDR) **(LDR)**

Aliases: Loan-to-Deposit Ratio, LDR, Transformation Ratio, LTD Ratio

◆ Contextual interpretation

SUMMARY DEFINITION

Proportion of customer deposits that is actively transformed and lent out as customer loans.

DETAILED EXPLANATION

The LDR measures the bank's financial intermediation depth. It compares net loans to customer deposits. A balanced ratio ensures that lending is funded by stable customer deposits without excessive reliance on wholesale funding.

ABIX CALCULATION FORMULA

Ratio Prêts / Dépôts = (Crédits Nets à la Clientèle ÷ Dépôts de la Clientèle) × 100

HOW TO INTERPRET?

An LDR between 70% and 90% indicates balanced intermediation. Below 60%, resources are under-deployed; above 100%, the bank relies on external funding.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Sous-intermédiation < 60 %, Équilibré 70-90 %, Tension liquidité > 100 %

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector average LDR of 78.2%, reflecting solid deposit backing.

LIQUIDITY & INTERMEDIATION · Unit: %

Loans to Total Assets (CRE_TB)

Aliases: Loans to Assets, Loan Asset Share, Credit Intensity

◆ Contextual interpretation

SUMMARY DEFINITION

Percentage of total bank assets allocated to customer loans.

DETAILED EXPLANATION

Reflects the bank's asset allocation profile. A high loan share characterizes a commercial lending bank, whereas a lower share indicates a sovereign paper or cash management focus.

ABIX CALCULATION FORMULA

$$\text{Prêts} / \text{Total Bilan} = (\text{Encours des Crédits Clientèle} \div \text{Total Bilan}) \times 100$$

HOW TO INTERPRET?

Measures core lending intensity. A higher ratio correlates with greater revenue sensitivity to private credit risk.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector average loan share of total assets of 60.0%.

LIQUIDITY & INTERMEDIATION · Unit: %

Treasury Securities to Total Assets (BDT_TB)

Aliases: Treasury to Assets, Sovereign Debt Exposure, Government Securities Share

◆ Contextual interpretation

SUMMARY DEFINITION

Percentage of total assets invested in sovereign debt securities issued by the Algerian State Treasury.

DETAILED EXPLANATION

Measures the sovereign allocation weight within the asset base. Historically in Algeria, public banks hold material Treasury securities volumes from balance sheet restructuring and liquidity placements.

ABIX CALCULATION FORMULA

$$BDT / Total Bilan = (Encours des Bons du Trésor \div Total Bilan) \times 100$$

HOW TO INTERPRET?

A high ratio secures liquidity and sovereign coupon income, but may reflect relative crowding-out of private sector credit.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Average Treasury securities share of 20.5% of sector total assets.

ABIX MODULES

LIQUIDITY & INTERMEDIATION · Unit: %

Deposits to Total Assets (Liabilities) (DEP_TB)

Aliases: Deposits to Assets, Customer Funding Ratio, Deposit Funding Share

◆ Contextual interpretation

SUMMARY DEFINITION

Percentage of total balance sheet funded by customer deposits.

DETAILED EXPLANATION

Measures the bank's structural reliance on customer deposits compared to other funding sources (equity, interbank borrowing, bond issues).

ABIX CALCULATION FORMULA

$$\text{Dépôts} / \text{Total Bilan} = (\text{Dépôts de la Clientèle} \div \text{Total Bilan}) \times 100$$

HOW TO INTERPRET?

A share above 75-80% characterizes a traditional commercial retail banking model with a granular, stable funding base.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector average deposit share of 76.8% of total liabilities.

ABIX MODULES

LIQUIDITY & INTERMEDIATION · Unit: Mds DZD

Other Assets (Residual Balance) (AA)

Aliases: Other Assets, Residual Assets

◆ Contextual interpretation

SUMMARY DEFINITION

Portion of total assets not accounted for by customer loans and Treasury securities.

DETAILED EXPLANATION

In ABIX balance sheet allocation models, Other Assets is the residual balance (Total Assets minus Loans minus Treasury Securities), encompassing cash, central bank reserves, interbank placements, fixed assets, and sundry accounts.

ABIX CALCULATION FORMULA

Autres Actifs = Total Bilan – Prêts clientèle – Bons du Trésor

HOW TO INTERPRET?

Enables full 100% balance sheet decomposition (Loans + Treasury + Other = 100%). A negative value flags potential data inconsistency.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector other assets volume of ~3,600 billion DZD (~19.5% of total assets).

ABIX MODULES

Vue Secteur, Profil Banque, Allocation d'actifs

LIQUIDITY & INTERMEDIATION · **Regulatory Standard** · Unit: %

Liquidity Coverage Ratio (LCR) (LCR)

Aliases: Liquidity Coverage Ratio, LCR, Short-Term Liquidity Ratio

▲ Higher generally better

SUMMARY DEFINITION

Bank capacity to withstand severe 30-day acute liquidity stress.

DETAILED EXPLANATION

Compares high-quality liquid assets (HQLA) readily convertible to central bank cash against estimated 30-day net cash outflows under severe stress. Standard requirement: Minimum 100%.

ABIX CALCULATION FORMULA

LCR = (Stock d'Actifs Liquides de Haute Qualité HQLA ÷ Sorties Nettes de Trésorerie à 30j) × 100

HOW TO INTERPRET?

An LCR above 100% ensures the bank holds sufficient liquid buffers to withstand deposit run-offs without emergency aid.

CLASSIFICATION & THRESHOLDS

Mandatory Regulatory Framework : >= 100 % (Standard prudentiel de liquidité Bâle III)

ABIX Comfort Benchmark : Repère de confort >= 120 %

CONCRETE EXAMPLE (Exemple méthodologique normatif Bâle III)

Normative example: For 120B DZD in HQLA and 80B DZD in 30-day modeled net outflows, LCR is 150% (exceeding 100% minimum).

LIQUIDITY & INTERMEDIATION · **Regulatory Standard** · Unit: %

Net Stable Funding Ratio (NSFR) (NSFR)

Aliases: Net Stable Funding Ratio, NSFR, Structural Liquidity Ratio

▲ Higher generally better

SUMMARY DEFINITION

Measures structural alignment between stable available funding and required illiquid assets over a 1-year horizon.

DETAILED EXPLANATION

NSFR limits excessive reliance on short-term wholesale funding to finance long-term assets. It divides available stable funding (ASF) by required stable funding (RSF). Prudential standard: Minimum 100%.

ABIX CALCULATION FORMULA

$NSFR = (\text{Montant de Financement Stable Disponible ASF} \div \text{Financement Stable Exigé RSF}) \times 100$

HOW TO INTERPRET?

An NSFR above 100% confirms that long-term illiquid assets are funded by durable, sticky equity and deposits.

CLASSIFICATION & THRESHOLDS

Mandatory Regulatory Framework : $\geq 100\%$ (Standard prudentiel de financement stable Bâle III)

ABIX Comfort Benchmark : Repère de confort $\geq 110\%$

CONCRETE EXAMPLE (Exemple méthodologique normatif Bâle III)

Methodological example: 200B DZD ASF covering 160B DZD RSF yields a solid 125% NSFR.

Statistics & Quantitative Methods

11 terms in this category

STATISTICS & QUANTITATIVE METHODS · Unit: selon indicateur

Arithmetic Mean (Average) (MOY)

Aliases: Arithmetic Mean, Average, Sample Mean

◆ Contextual interpretation

SUMMARY DEFINITION

Sum of all observed values divided by the total number of banks in the sample.

DETAILED EXPLANATION

The arithmetic mean measures central tendency. In ABIX Data Explorer, it is computed strictly on available numeric observations (excluding nulls). It can be sensitive to extreme outliers in highly concentrated banking systems.

ABIX CALCULATION FORMULA

Moyenne = $(\sum X_i) \div N$ (pour $i = 1 \text{ à } N$)

HOW TO INTERPRET?

Provides the overall market level, but should be compared with the median to assess distributional skewness.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Sector mean ROE is 11.4% vs median of 9.8% (positive skew driven by top performers).

ABIX MODULES

STATISTICS & QUANTITATIVE METHODS · Unit: selon indicateur

Median (50th Percentile / Q2) (MED)

Aliases: Median, 50th Percentile, Midpoint, Q2

◆ Contextual interpretation

SUMMARY DEFINITION

Value separating the ordered sample of banks into two equal halves (50% above, 50% below).

DETAILED EXPLANATION

The median is ABIX's primary robust central tendency metric because it is fully resistant to extreme outliers and public bank scale distortions. Exact formulation: 1) For an odd number N of banks (e.g. 21 banks in 2026): Median = central value at rank (N+1)/2; 2) For an even number N of banks (e.g. 20 banks in 2025): Median = arithmetic average of the two central values at ranks N/2 and (N/2)+1.

ABIX CALCULATION FORMULA

Si N impair : Médiane = $X_{((N+1)/2)}$ | Si N pair : Médiane = $(X_{(N/2)} + X_{(N/2 + 1)}) \div 2$

HOW TO INTERPRET?

Represents the performance of a typical median bank in Algeria without weighting bias towards giant public banks.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition (20 banks, even N): Median CIR is the average of the 10th bank (43.2%) and 11th bank (43.8%), exactly 43.5%.

Quartiles & Percentiles (Q1, Q2, Q3) (QUART)

Aliases: Quartiles, Q1, Q2, Q3, Four-tier distribution, Percentile Thresholds

◆ Contextual interpretation

SUMMARY DEFINITION

Three statistical thresholds (Q1=25th, Q2=50th=Median, Q3=75th percentile) dividing the sector into four equal cohorts.

DETAILED EXPLANATION

Descriptive quartile thresholds: 1) Q1 = 25th percentile; 2) Q2 = 50th percentile = Median; 3) Q3 = 75th percentile. ABIX engine computes percentiles using linear interpolation $(N-1)*p$. ABIX Performance Note: In ABIX executive restitution, the 'Q1' label is awarded to the top 25% best performers (e.g. highest ROE or lowest Cost-to-Income).

ABIX CALCULATION FORMULA

Q1 = P25 (interpolation linéaire) | Q2 = Médiane (P50) | Q3 = P75 (interpolation linéaire)

HOW TO INTERPRET?

Positions each bank objectively within its peer distribution tier without mean-driven distortion.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, sector ROE (20 banks): Q1 = 6.2%, Q2 = 9.8%, Q3 = 14.5%. Banks with ROE > 14.5% belong to the top performance quartile Q1.

STATISTICS & QUANTITATIVE METHODS · Unit: selon indicateur

Standard Deviation (σ) (SIGMA)

Aliases: Standard Deviation, Sigma, Sample Dispersion

◆ Contextual interpretation

SUMMARY DEFINITION

Statistical measurement of data dispersion around the arithmetic mean.

DETAILED EXPLANATION

Quantifies the homogeneity or dispersion of banking metrics across institutions. Statistical note: In an approximately normal distribution, ~68% of observations fall within ±1σ and ~95% within ±2σ of the mean.

ABIX CALCULATION FORMULA

$$\text{Écart-type } (\sigma) = \sqrt{ \left[\frac{1}{N} \times \sum (Xi - \bar{X})^2 \right] }$$

HOW TO INTERPRET?

Evaluates mean representativeness and identifies outlier banks lying beyond 2 standard deviations.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: For a mean ROE of 11.4% with sector σ = 5.2%, the range [6.2% - 16.6%] encompasses the core bank cohort.

ABIX MODULES

STATISTICS & QUANTITATIVE METHODS · Unit: %

Coefficient of Variation (CV) (CV)

Aliases: Coefficient of Variation, CV, Relative Standard Deviation

◆ Contextual interpretation

SUMMARY DEFINITION

Ratio of standard deviation to arithmetic mean, expressing relative dispersion as a normalized percentage.

DETAILED EXPLANATION

The CV is a dimensionless metric enabling direct dispersion comparison across financial indicators with different units or scales (e.g. comparing deposits dispersion in billion DZD with ROE dispersion in %).

ABIX CALCULATION FORMULA

Coefficient de Variation (CV) = (Écart-type σ ÷ Moyenne arithmétique $\bar{X}$) × 100

HOW TO INTERPRET?

CV < 15% indicates strong sector homogeneity. CV > 30-50% indicates high dispersion and structural polarization.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition: Cost-to-Income CV is 24% (moderate), whereas Total Assets CV reaches 145% (extreme scale skewness).

Compound Annual Growth Rate (CAGR) (CAGR)

Aliases: CAGR, Compound Annual Growth Rate, Geometric Annual Growth

▲ Higher generally better

SUMMARY DEFINITION

Constant annual rate at which a metric would have grown from its base year to final year over n periods.

DETAILED EXPLANATION

CAGR smooths out year-to-year volatility through geometric progression. In ABIX Data Explorer, CAGR is used in the Growth scoring pillar (25% weight each on Assets, Loans, NBI, and Net Profit).

ABIX CALCULATION FORMULA

$$CAGR = [(Valeur\ Finale \div Valeur\ Initiale)^{(1 \div n)} - 1] \times 100$$

HOW TO INTERPRET?

Provides a standardized, fair multi-year growth comparison across institutions of varying scale.

CONCRETE EXAMPLE (Données 2021-2024, Édition ABIX 2025, périmètre constant)

2021-2024 data, ABIX 2025 edition (constant scope): Sector loans expanded from 8,500B to 11,100B DZD over 3 years, representing a CAGR of +9.3% per annum.

STATISTICS & QUANTITATIVE METHODS · Unit: % / pts

Year-over-Year Growth (YoY / Δ) (YoY)

Aliases: Year-over-Year, YoY Growth, Annual Change, Delta YoY

◆ Contextual interpretation

SUMMARY DEFINITION

Percentage change of a financial metric between period t and the preceding period t-1.

DETAILED EXPLANATION

Measures annual metric expansion or contraction. In ABIX Data Explorer, for indicators already expressed as percentages (e.g. ROE, CIR), the variation is strictly tracked in percentage points (point_change).

ABIX CALCULATION FORMULA

Pour agrégats (Mds DZD) : $YoY = [(V_t - V_{t-1}) \div V_{t-1}] \times 100$ | Pour ratios (%) : $\Delta = V_t - V_{t-1}$ (en points)

HOW TO INTERPRET?

Identifies trend shifts, commercial accelerations, or abrupt year-over-year decelerations.

CONCRETE EXAMPLE (Données 2024 vs 2023, Édition ABIX 2025)

2024 vs 2023 data, ABIX 2025 edition: Sector NBI grew by +8.2% YoY, while average ROE gained +0.6 percentage points.

STATISTICS & QUANTITATIVE METHODS · Unit: indice (base 100)

Rebased Index (Base 100) (B100)

Aliases: Base 100 Index, Rebased Growth, Indexed Trajectory

◆ Contextual interpretation

SUMMARY DEFINITION

Index normalizing base year metric to 100 to visually compare growth trajectories across banks of differing sizes.

DETAILED EXPLANATION

Base 100 fixes the initial selected year at 100. Subsequent years are computed as (Year Value / Base Value) * 100. This enables direct graphical trajectory comparison between large public and smaller private lenders.

ABIX CALCULATION FORMULA

$$\text{Indice Base 100 (t)} = (\text{Valeur_t} \div \text{Valeur_base}) \times 100$$

HOW TO INTERPRET?

An index of 135 indicates cumulative growth of +35% since the base year, regardless of initial bank size.

CONCRETE EXAMPLE (Données 2021-2024, Édition ABIX 2025)

2021-2024 data, ABIX 2025 edition (2021 base = 100): In 2024, sector deposits stand at 128.4 (+28.4% cumulative growth).

STATISTICS & QUANTITATIVE METHODS · Academic Reference · Unit: coefficient (-1 à +1)

Pearson Linear Correlation (r) (PEARSON)

Aliases: Pearson Correlation Coefficient, Linear Correlation, Pearson r

◆ Contextual interpretation

SUMMARY DEFINITION

Statistical measurement of the strength and direction of linear association between two financial metrics (-1 to +1).

DETAILED EXPLANATION

The Pearson coefficient r ranges from -1 (perfect inverse linear relation) to +1 (perfect positive linear relation), with 0 indicating no linear association. Fundamental ABIX rule: Correlation ≠ Causation. Furthermore, r measures strictly linear relationships and can be sensitive to extreme outliers.

ABIX CALCULATION FORMULA

$$r = \frac{\sum [(X_i - \bar{X})(Y_i - \bar{Y})]}{\sqrt{\sum (X_i - \bar{X})^2} \times \sqrt{\sum (Y_i - \bar{Y})^2}}$$

HOW TO INTERPRET?

|r| > 0.70 indicates strong linear correlation; 0.40 < |r| < 0.70 moderate; |r| < 0.40 weak or non-linear association.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Forte correlation si |r| >= 0,70 (Seuil d'exclusion multicollinéarité ABIX: |r| >= 0,85)

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, 20-bank scope: Strong positive linear correlation of r = +0.88 observed between Customer Deposits and Total Assets.

STATISTICS & QUANTITATIVE METHODS · Academic Reference · Unit: score (sans unité)

Standardized Z-Score (Relative Positioning) (Z-SCORE)

Aliases: Standardized Score, Z-Score, Standard Normal Deviate, Robust Z-Score

◆ Contextual interpretation

SUMMARY DEFINITION

Number of standard deviations separating a bank's metric from the sector mean (or median).

DETAILED EXPLANATION

Standardizes metrics to a unitless scale centered at zero. ABIX implements two variants: 1) Classic $Z = (X - \text{Mean}) / \sigma$; 2) Robust $Z = 0.6745 * (X - \text{Median}) / \text{MAD}$. Statistical note: The equivalence of $Z = +2$ with the top 2.5% holds strictly only under the assumption of a normal distribution.

ABIX CALCULATION FORMULA

$Z \text{ classique} = (X - \bar{X}) \div \sigma$ | $Z \text{ robuste} = 0,6745 \times (X - \text{Médiane}) \div \text{MAD}$

HOW TO INTERPRET?

$Z = 0$ places the bank at market center. $Z > +2$ or $Z < -2$ flags an outlier significantly diverging from sector norms.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Zone standard [-2 ; +2], Profil atypique si $|Z| > 2$

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition: A bank with 21.8% ROE against a sector mean of 11.4% ($\sigma = 5.2\%$) achieves $Z = +2.00$.

Min-Max Normalization (0-100 Scale) (MINMAX)

Aliases: Min-Max Scaling, Feature Rescaling, Normalized Score 0-100

▲ Higher generally better

SUMMARY DEFINITION

Linear transformation of a financial metric onto a standardized scale from 0 to 100 points.

DETAILED EXPLANATION

Projects metrics onto a common 0-100 scale where 100 represents top performance. ABIX scoring rules: 1) Positive direction (higher is better, e.g. ROE, Solvency): $\text{Score} = [(X - \text{Min}) / (\text{Max} - \text{Min})] \times 100$; 2) Inverted direction (lower is better, e.g. CIR, NPL ratio): $\text{Score} = [(\text{Max} - X) / (\text{Max} - \text{Min})] \times 100$. Edge case: If Max equals Min, score defaults to 50.

ABIX CALCULATION FORMULA

Sens direct : $\text{Score} = [(X - \text{Min}) \div (\text{Max} - \text{Min})] \times 100$ | Sens inverse : $\text{Score} = [(\text{Max} - X) \div (\text{Max} - \text{Min})] \times 100$

HOW TO INTERPRET?

Enables aggregation and direct comparison of disparate indicators across ABIX dimensional score pillars.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Score 0 (Pire de la place) à 100 (Leader de la place)

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, Cost-to-Income (inverted direction): Min = 28.0%, Max = 78.0%. A bank with 38.0% CIR receives a normalized score of $[(78.0 - 38.0) / (78.0 - 28.0)] \times 100 = 80.0 / 100$.

4 terms in this category

SECTOR & MARKET ANALYSIS · Unit: %

Market Share (PDM)

Aliases: Market Share, Market Weight, Volume Share

◆ Contextual interpretation

SUMMARY DEFINITION

Percentage held by a single bank across an aggregate relative to total consolidated sector volume.

DETAILED EXPLANATION

Measures commercial footprint and competitive positioning across financial aggregates (Assets, Deposits, Loans, NBI). ABIX note: Market share is an indicator of relative scale, not an intrinsic measure of profitability or efficiency (contextual reading direction ◆).

ABIX CALCULATION FORMULA

Part de Marché = (Valeur de la Banque ÷ Total Consolidé du Secteur) × 100

HOW TO INTERPRET?

High market share provides economies of scale, but does not inherently guarantee superior unit profitability.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, Total Assets (20 banks): Market leader holds approx. 24.5% market share, with public banks aggregating ~87%.

SECTOR & MARKET ANALYSIS · Unit: pts de %

Market Share Delta (Gain / Loss) (DELTA_PDM)

Aliases: Market Share Change, Market Share Delta, Share Shift

◆ Contextual interpretation

SUMMARY DEFINITION

Absolute difference in percentage points between market share at period t and period t-1.

DETAILED EXPLANATION

Measures net competitive momentum and market share shifts among banks. A market share gain indicates the bank outgrew the overall sector on that metric.

ABIX CALCULATION FORMULA

$\Delta \text{ Part de Marché} = \text{Part de Marché}_t - \text{Part de Marché}_{t-1}$ (en points de pourcentage)

HOW TO INTERPRET?

Sustained share gains reflect aggressive commercial conquest. Share loss indicates commercial slowdown or deliberate de-risking.

CONCRETE EXAMPLE (Données 2024 vs 2023, Édition ABIX 2025)

2024 vs 2023 data, ABIX 2025 edition: A bank expanding loan market share from 3.20% to 3.55% records a net gain of +0.35 pts.

Public vs Private Sector Segmentation (PUB_PRIV)

Aliases: Public vs Private Banks, Ownership Split, State vs Private Banking

◆ Contextual interpretation

SUMMARY DEFINITION

Institutional classification of banks according to ownership structure (State-owned vs Private lenders).

DETAILED EXPLANATION

Distinguishes the 6 major state-owned commercial banks (plus CNEP-Banque) from the 14 private lenders (international subsidiaries, regional and Islamic banks). Central to ABIX for analyzing structural divergences.

ABIX CALCULATION FORMULA

Agrégat Public = Σ Banques Publiques | Agrégat Privé = Σ Banques Privées

HOW TO INTERPRET?

Isolates the massive public bank balance sheet dominance (~87%) alongside private banks' relative profitability dynamism.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition (20 banks): Public sector holds 86.8% of assets and 88.4% of deposits, while private banks generate over 28% of total net income.

Constant Scope vs Observed Scope (SCOPE)

Aliases: Constant Scope, Like-for-like scope, Observed Sample

◆ Contextual interpretation

SUMMARY DEFINITION

Filtering method ensuring only banks with uninterrupted financial reporting across the full timeline are included in multi-year aggregates.

DETAILED EXPLANATION

ABIX offers two scope modes: 1) Observed Scope (all reporting banks for a given year); 2) Constant Scope (strictly banks with complete data from start to end year), eliminating distortion in CAGR and Base 100 metrics.

ABIX CALCULATION FORMULA

Périmètre Constant = { Banques présentes sur chaque année de [Année_début ; Année_fin] }

HOW TO INTERPRET?

Essential for mathematical integrity in multi-year trend analysis, CAGR, and indexed trajectories.

CONCRETE EXAMPLE (Données 2020-2024, Édition ABIX 2025)

2020-2024 data, ABIX 2025 edition: 5-year constant scope retains the 19 continuously active banks, ensuring 100% consistent sector CAGR.

CONCENTRATION & COMPETITION · **Market Reference** · Unit: points (0 à 10 000)

Herfindahl-Hirschman Index (HHI) **(HHI)**

Aliases: Herfindahl Index, HHI, Market Concentration Index

◆ Contextual interpretation

SUMMARY DEFINITION

Sum of squared market shares of all operating banks, measuring sector concentration on a 0 to 10,000 scale.

DETAILED EXPLANATION

HHI squares market shares, placing greater weight on top banks. Standard competitive reading grid (indicative DOJ/FTC benchmarks): 1) HHI < 1,000: Unconcentrated market; 2) 1,000 <= HHI <= 1,800: Moderately concentrated; 3) HHI > 1,800: Highly concentrated. Mandatory ABIX note: These thresholds constitute a standardized competitive analytical grid and do not represent an automatic legal qualification of the Algerian banking market.

ABIX CALCULATION FORMULA

$HHI = \sum (Part\ de\ Marché_i)^2$ (pour $i = 1$ à N banques, parts exprimées en %)

HOW TO INTERPRET?

A high HHI (> 1,800) characterizes an oligopolistic structure where a small group of banks commands the majority of deposits and lending.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : HHI < 1000: Peu concentré | 1000-1800: Modéré | > 1800: Fortement concentré (Grille concurrentielle indicative)

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, Total Assets (20 banks): Sector HHI stands at approx. 1,920 points, characterizing a highly concentrated market by international standards.

CONCENTRATION & COMPETITION · [Market Reference](#) · Unit: %

Concentration Ratios (CR3 & CR5) (CR3_CR5)

Aliases: Concentration Ratio 3, CR3, CR5, Top 3 / Top 5 Share

◆ Contextual interpretation

SUMMARY DEFINITION

Cumulative market share command held by the top 3 (CR3) or top 5 (CR5) leading banks on a financial metric.

DETAILED EXPLANATION

Concentration ratios measure top-tier market command. General definition: CR3 = sum of market shares of the top 3 ranked banks; CR5 = sum of market shares of the top 5 banks for the selected metric and year. ABIX note: Bank rankings are dynamic and computed per year and indicator. Specific bank names appear exclusively in dated historical examples.

ABIX CALCULATION FORMULA

CR3 = Part_1 + Part_2 + Part_3 | CR5 = Part_1 + Part_2 + Part_3 + Part_4 + Part_5 (parts triées par ordre décroissant)

HOW TO INTERPRET?

CR3 > 50% or CR5 > 70% characterizes a market heavily dominated by a tight leadership cohort.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : CR3 > 50 %: Forte entreprise oligopolistique | CR5 > 70 %: Marché très concentré

CONCRETE EXAMPLE (Exemple daté — Données 2024, Édition ABIX 2025, Total Bilan (20 banques))

Dated example — Total Assets 2024, ABIX 2025 edition (20 banks): Top 3 banks (BEA, BNA, CPA) aggregate a CR3 of 52.4%, and top 5 (with BADR and BDL) reach a CR5 of 74.8%.

CONCENTRATION & COMPETITION · Unit: banques équivalentes

Effective Number of Banks (Equivalent Competitors) (NEFF)

Aliases: Effective Number of Banks, Equivalent Competitors, HHI Inverted Number

◆ Contextual interpretation

SUMMARY DEFINITION

Theoretical number of equal-sized banks that would generate the same HHI concentration level observed in the market.

DETAILED EXPLANATION

Calculated as 10,000 / HHI. It translates concentration into intuitive terms: in a market with 20 nominal banks, an HHI of 2,000 implies the competitive equivalent of only 5 equal-sized competitors.

ABIX CALCULATION FORMULA

Nombre Effectif de Banques = 10 000 ÷ HHI

HOW TO INTERPRET?

The wider the gap between nominal and effective bank counts, the more pronounced the market asymmetry and top-bank dominance.

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025, périmètre de 20 banques)

2024 data, ABIX 2025 edition, Total Assets (20 nominal banks): With an HHI of 1,920, the effective competitor count is 5.2 equivalent banks.

ABIX METHODOLOGY & FRAMEWORK · [Benchmark ABIX](#) · Unit: scores dimensionnels (0-100)

ABIX 4D Assessment Framework (4D_ABIX)

Aliases: 4D Framework, ABIX 4D Scores, Multidimensional Evaluation Model

◆ Contextual interpretation

SUMMARY DEFINITION

Methodological architecture structured across 4 independent analytical pillars: Profitability, Growth & Momentum, Efficiency, and Capitalization.

DETAILED EXPLANATION

ABIX 4D Framework assesses banks across four pillars: 1) Profitability (ROE, ROA, Net Margin - 33.3% each); 2) Growth & Momentum (multi-year CAGR across Assets, Loans, NBI, Profit - 25% each); 3) Operational Efficiency (Cost-to-Income, GOI Conversion - 50% each); 4) Accounting Capitalization (Equity/Assets, Equity/Loans - 50% each). Fundamental rule: 4D Framework enforces multidimensional profiling to prevent a single composite score from concealing specific bank vulnerabilities. ABIX explicitly avoids monolithic single ratings.

ABIX CALCULATION FORMULA

4 Scores indépendants (0-100) : Score_Rentabilité + Score_Croissance + Score_Efficience + Score_Capitalisation

HOW TO INTERPRET?

Enables radar mapping and positioning matrices to instantly spot structural imbalances (e.g. rapid growth with lagging capital cushion).

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Lecture multidimensionnelle par pilier (sans note composite globale artificielle)

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025)

2024 data, ABIX 2025 edition: A leading private lender exhibiting top Profitability (88/100) and Efficiency (92/100) combined with moderate Growth (64/100).

Deterministic Rule-Based Scanning (SCAN)

Aliases: Rule-Based Scanning, Deterministic Alerts, Financial Outlier Scanning

◆ Contextual interpretation

SUMMARY DEFINITION

Automated, 100% traceable audit engine identifying trend breaks, balance sheet divergences, and material benchmark gaps.

DETAILED EXPLANATION

Deterministic scanning applies transparent, versioned rules (v1.0) directly to financial metrics without black-box modeling. Implemented rules in ABIX: 1) Benchmark gap: absolute gap ≥ 5.0 pts; 2) Notable annual variation: YoY change $\geq 15\%$ (or ratio point change ≥ 5.0 pts); 3) Dimension quartile shift (score change ≥ 10 pts); 4) Activity divergence alerts: a) Deposits vs Loans growth gap ≥ 10 pts; b) NBI up $\geq 15\%$ with Net Profit down $\leq -10\%$; c) Assets up $\geq 10\%$ with ROE down ≤ -2 pts; d) Net provision surge $\geq +30\%$.

ABIX CALCULATION FORMULA

Règles déterministes d'alerte : $|\Delta \text{ Ratio}| \geq 5 \text{ pts} \mid \text{YoY} \geq 15 \% \mid \Delta \text{ Dépôts} - \Delta \text{ Crédits} \geq 10 \text{ pts} \mid \Delta \text{ Provisions} \geq 30 \%$

HOW TO INTERPRET?

Guarantees complete mathematical auditability of analytical insights displayed in executive dashboards and bank profiles.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Règles arithmétiques de détection versionnées v1.0 (100 % traçable)

CONCRETE EXAMPLE (Données 2024, Édition ABIX 2025)

2024 data, ABIX 2025 edition: Automatic divergence alert triggered for a bank whose deposits grew +18.5% while loans only expanded +4.2% (gap = 14.3 pts ≥ 10 pts threshold).

E-Banking & Digital Transformation Barometer (EBANK)

Aliases: E-Banking Barometer, Digital Banking Index, Online Banking Score

▲ Higher generally better

SUMMARY DEFINITION

Benchmarking framework evaluating bank digital maturity through auditing mobile apps, web platforms, and e-payment services.

DETAILED EXPLANATION

The ABIX E-Banking Barometer is an independent benchmarking tool evaluating digital banking across Algeria. It audits over 40 criteria spanning mobile app functionality, online banking, e-payment capabilities, and UX design.

ABIX CALCULATION FORMULA

Score E-Banking = Σ (Pondération_dimension × Score_dimension) (sur une échelle normalisée de 0 à 100)

HOW TO INTERPRET?

A top score reflects a mature, seamless, and secure digital banking offering for retail and corporate clients.

CLASSIFICATION & THRESHOLDS

ABIX Comfort Benchmark : Score 0-100 normalisé sur grille multicritère auditée

CONCRETE EXAMPLE (Édition Baromètre ABIX 2025)

ABIX Barometer 2025 edition: Bank scores ranging from 32/100 (basic features) to over 86/100 for leading digital pioneers.
